Re: Conflict Mineral Statement

Dear Valued Customer,

As a leader in the magnetic components industry, we are committed to being a responsible partner to our global customers. As a result, we have worked diligently with our vendors to ensure that the supplies of minerals do not come from Conflict Regions in Democratic Republic of the Congo.

These minerals (3TG) include:

Tantalum (Ta), Tungsten (W), Tin (Sn), Gold (Au)

The minerals that HALO uses in our processes and products are tin and gold. Tin is used as plating on our leads and in our soldering processes while gold is used in contact plating of our FastJack™ products.

HALO requires our suppliers to conform to this policy & conducts periodic reviews with vendors to ensure that they are in compliance. Based on our knowledge and research, we are confident that the materials used in our manufacturing process and products do not contain minerals (as listed above) that originate from the Democratic Republic of the Congo Conflict Regions.

Sincerely,

A handwritten signature in blue ink that reads "Eric Chew". The signature is written in a cursive, flowing style.

Eric Chew
