

HALO Electronics, Inc. Introduces the Mini-Octal™ The Industry's Highest Density Quad Port T1/E1 Magnetics

Press Release: February, 2001

The Mini-Octal™ Series is another "HALO first" providing four ports of 1.5kV isolation magnetics in a compact 32 pin package. This new family of product is the industry's smallest T1/E1 solution for real estate sensitive applications requiring the highest density.

The Mini-Octal™ achieves a 50% reduction in PCB area over traditional multi-port solutions. The

package is 1.0" in length while maintaining a narrow width of 0.430" max. (lead tip to lead tip). This compact design enables the telecom network designer to optimize his circuit layout.

Additionally, the Mini-Octal™ series also provides a significant cost advantage, reducing the cost per port by more than 30% over traditional single port solutions. UL1950, IEC950, and EN60950 recognized. Data sheets and samples are available under NDA's. Production quantities are available from stock to 8 weeks.

HALO Electronics is a technology leading, manufacturer of communications magnetics providing next generation solutions today for the LAN and WAN industries. The company is a global supplier with over 2500 dedicated employees.
