

HALO® Electronics Opens New Manufacturing Plant in Vietnam

November 25th, 2025

Santa Clara, California – HALO Electronics is pleased to announce the opening of our new manufacturing facility in Vietnam. This plant is our first outside of China and represents a significant step forward in supporting our customers’ supply-chain risk management initiatives.

Production is scheduled to begin in **December 2025**, immediately following the **UL audit and recognition**, which is expected by **December 10th**. Initial output will focus on a select group of popular standard part numbers. Additional products will be added over time based on customer demand.

While manufacturing costs in Vietnam are higher than at our two facilities in China-and customer pricing will reflect this difference-the impact is expected to be **offset by lower U.S. tariffs** on Vietnam-built products compared to those manufactured in China.

To help customers manage pricing and clearly specify their preferred manufacturing location, HALO is introducing a simple part number suffix for Vietnam-built products. **Adding a space and the number “2” to any standard HALO part number will designate production in the Vietnam plant.**

Examples:

China-Built Products	Vietnam-Built Products
TG110-S050N2LF	TG110-S050N2LF 2
TG110-S050N2LFTR	TG110-S050N2LFTR 2
HFJ11-2450E-L12RL	HFJ11-2450E-L12RL 2

Product performance, datasheet specifications, and regulatory status remain unchanged regardless of manufacturing location. Customers can simply apply the “_2” suffix to ensure their products are produced at the Vietnam facility.

For more information or questions, please reach out to your local HALO Representative or email us at info@haloelectronics.com.
